

Low-cost massproducible strike drones

Tenet is a company that designs and manufactures low-cost drones with proprietary software and purpose-built hardware. Every development we make is to reduce the cost of the final product.

Competitive advantages

01

Production speed

We use design-for-automation to create products that are non-complex and fast to manufacture.

02

Modular software

Proprietary SW platform. The same SW can be used to develop low-cost fixed-wings and missiles.

03

Scalability

Rapidly scalable to million-unit production for FPV drones.

04

Purpose-built HW

HW is built for the specific mission to be carried out, e.g. kamikaze.

05

Low-cost

SW platform designed from the ground up to minimize cost.

06

Manufacturing

Product built for dispersed production

FPV drone

Propellers: 7 inches

Range: ~20km

Payload: 2 kg

Flighttime (without payload): 30 minutes

About the drone

We run a modified ELRS system with an extremely wideband radio that frequency-hops on an encrypted channel.

Assembly time under 2 minutes with all components included. Almost half the cost of Brave1 drones.

Product roadmap

FPV kamikaze

Quadcopter drone.

Drone exists

Fixed-wing, SIB & Vampire version

Low-cost drones on the same SW platform.

Technology roadmap

Autonomy

Autonomous navigation, detection and target seeking.

Under development

Swarm

Mass-produced drones operating in swarms.

About Tenet

Tenet was founded by people with roots in KTH's rocketry association and manufacturing association, where we built drones and rockets. We have experience from both the military, the manufacturing industry, and the consumer electronics sector. Five people on the team with more on the way.
